How Edox Manipulated Relativity Software To Simplify Hosted Review for a Fortune 500 Company

SIZE:	Fortune 500	
LOCATION:	Chicago, IL and Houston, TX	
TIMING:	November 2010 to March 2011	

Imagine if you had to review 50,000 documents... one at a time. It could take *years*.

That was exactly the situation our client was in before they connected with us. They had a large document set to review on an FTP site that only allowed a single document to be downloaded and reviewed at a time. They were in need of a technical solution and a hosted platform that would allow them to review and tag data easily and quickly.

We started by consulting with our client to understand their needs, challenges and timelines. From there, we connected with the vendor that had originally created the FTP site and gathered the information we needed to successfully reverse engineer their work in order to rebuild the solution optimally in Relativity. As we worked toward organizing their documents in Relativity, we took care to create a detailed folder structure that was instrumental in simplifying the identification of documents for our client.

The result? With our strong technical expertise and thorough approach, we successfully created a hosted review solution that allowed our client to review their ESI within a matter of days rather than within months or years. Not only was the client relieved, but the judge on the case instructed other firms to use the same method we'd used; as other firms were not able to replicate our work, we were happy to assist them, too.

On anonymous case studies: The privacy of our clients is important to us. That's why we keep details, such as names, confidential. When you work with us, you can be sure your privacy will always be protected.
